

# 第四次作业

## 1.欧拉第9题

```
1 //法一:
2 #include <stdio.h>
3
4 int is_triplet(int a, int b, int c) {
5     if (a * a + b * b == c * c) return 1;
6     else return 0;
7 }
8
9 int main() {
10     for (int i = 3; i < 900; i++) {
11         for (int j = i + 1; j < 1000; j++) {
12             if (!is_triplet(i, j, (1000 - i - j))) continue;
13             printf("%d\n", i * j * (1000 - i - j));
14             break;
15         }
16     }
17     return 0;
18 }
```

```
1 //法二:
2 #include <stdio.h>
3 #include <stdlib.h>
4 #include <math.h>
5
6 int main() {
7     int flag = 1;
8     int a, b, c, e;
9     for (int i = 1; i < 25 && flag; i++) {
10         for (int j = i + 1; j <= 25 && flag; j++) {
11             a = 2 * i * j;
12             b = j * j - i * i;
13             c = j * j + i * i;
14             if (1000 % (a + b + c) == 0) {
15                 e = (int)pow(1000 / (a + b + c), 3);
16                 printf("%d\n", e * a * b * c);
17                 flag = 0;
18             }
19         }
20     }
21     return 0;
22 }
```

## 2.欧拉第20题

```

1  #include <stdio.h>
2  #define MAX_N 10000
3
4  int num[MAX_N + 5] = {1, 1};
5
6  int sum_digit(int n) {
7      for (int i = 1; i <= n; i++) {
8          for (int j = 1; j <= num[0]; j++) {
9              num[j] *= i;
10         }
11         for (int j = 1; j <= num[0]; j++) {
12             if (num[j] < 10) continue;
13             num[j + 1] += num[j] / 10;
14             num[j] = num[j] % 10;
15             num[0] += (j == num[0]);
16         }
17     }
18     int ans = 0;
19     for (int i = 1; i <= num[0]; i++) {
20         ans += num[i];
21     }
22     return ans;
23 }
24
25 int main() {
26     int n = 100;
27     printf("%d\n", sum_digit(n));
28     return 0;
29 }

```

### 3.欧拉第22题

```

1  #include <iostream>
2  #include <stdio.h>
3  #include <string.h>
4  #include <inttypes.h>
5  #include <algorithm>
6  #include "22.h"
7
8  int main() {
9      int64_t i = 0, ans = 0;
10     while (nameList[i].length() != 0) i++;
11     std::sort(nameList, nameList + i);
12     i = 0;
13     while (nameList[i].length() != 0) {
14         int64_t sum = 0;
15         for (int j = 0; j < nameList[i].length(); j++) {
16             sum += nameList[i][j] - 'A' + 1;
17         }
18         ans += sum * (i + 1);
19         i++;
20     }

```

```
21     printf("%" PRId64 "\n", ans);  
22     return 0;  
23 }
```
